Series EPS/PU 10000 4U

EPS's Electronic Power Supplies »EPS/PU 10000 4U« series new electronic high performance ATE power supplies are especially suitable for test systems and industrial controls due to their compact construction in a 19" enclosure with 4 height units (U). DC output voltages between 0-60V (SELV) and 0-2000V, output currents between 0-40A and 0-1000A with an output power of 30kW-1920kW are available.

All models are controlled by microprocessors for fast and exact measurement of actual values (FPGA, latest SiC technology).

For remote control using a PC or PLC the devices are provided as standard with an Ethernet, USB-B slot on the rear side as well as a galvanically isolated analog interface. Via optional plug-in interface modules, other digital interfaces such as RS232, Profibus, ProfiNet, ModBus TCP, CAN, CANopen or EtherCAT can be added. These enable the devices to be connected to standard industrial buses simply by changing or adding a small module. The configuration, if necessary at all, is simple.

The devices in series EPS/PU 10000 4U represent matching models to series E/PS 10000 4U or E/PSI 10000 4U. They serve as extension modules, so called power units, which are intended to build master-slave systems with higher total power. Devices from series E/PSI 10000 or E/PS 10000, which both have a TFT touch display, can serve as master unit, but all EPS/PU 10000 4U can also serve as master for other 10000 series power supplies should the control be solely remote.

Optionally there are also a water-cooled version available which are usually assembled and offered in cabinet systems with a complete water-cooling distribution inside. For DIY water-cooled systems, single units can also be obtained upon request.

Further options are function generator, calibration with protocol and extended warranty.

The devices are CE, UL as well as CSA certified.
